

Coloured Records (7"/ 10"/ 12" Vinyl)

We are able to propose the following coloured and multicoloured vinyl options, with transparent and solid colours. You'll find on the following pages our standard colours (transparent and solid) which we have constantly in stock. Please note that the quality of coloured vinyl may have worse acoustic properties when compared to standard black vinyl. Transparent records have better sound quality than solid records.

Vinyl colours may also appear in different shades depending on light, background and opacity. Coloured Vinyl records may show run-marks or slight traces of other colours as machines cannot run 100% clean. As coloured Vinyl is produced from different batches of material small variations in colour do apply.

We are also able to make special colours in accordance with a Pantone colour reference. We cannot assure an exact colour match but we will attempt to create a colour that is as close as possible to your chosen colour. Please note that some colours can only be made either in transparent or in solid colour. We can offer you any personal assistance when choosing a colour.

The following images do not match exactly the original colour of the vinyl, but it should give you a good idea.

I. Permanent stock (ready made vinyl colours)

Transparent Standard Colours
